

SQUORING Technologies and ANSYS combine their solutions to provide ANSYS SCADE users with a new metrics management and monitoring module

Toulouse, March 21st 2017 – SQUORING Technologies announced today a new collaboration with ANSYS for a metrics management solution dedicated to ANSYS® SCADE product family users.

“Relying on relevant performance indicators is a key factor in a project’s success,” says Patrick Artola, CEO of SQUORING Technologies.

In order to enable ANSYS SCADE users to ensure success of their embedded critical software development projects, ANSYS and SQUORING Technologies therefore collaborated to propose a monitoring solution based on reliable and relevant metrics. »

The « SQUORE for SCADE® » solution powered by SQUORING Technologies allows to track SCADE projects data and to compare them to baseline data, thus enabling project managers and designers to make the right decisions all along the project lifecycle.

About SQUORING Technologies:

Since 2010, SQUORING Technologies develops and provides leading solutions for evaluating and optimizing software projects quality and performance. Adopted by major international companies, including Alstom, Continental, DCNS, Sagem, Schneider Electric or Thales Group, the tool “SQUORE for Software Analytics” gathers, aggregates and turns into relevant indicators all kinds of data produced during software projects lifecycle to monitor and ensure projects performance, process compliance and quality of deliverables. IT departments thus increase their maturity and efficiency in developing their software systems, resulting both in higher reliability for final users, and in a longer lifetime of application assets.
